### Intumescent Fire & Smoke Push-Fit Door Seals

#### **Description:**

Plastic intumescent fire and smoke seal. Simply clips in to routed groove with no need for adhesive or pins. Available in brown or white and in 2100mm lengths. Available with or without brush or rubber smoke seal.

#### **Application:**

By simply routing a groove 5mm deeper than required for the seal itself, the additional grooving if door edges need further planing is eliminated. When the door set correctly closes and is ready for use the carpenter just clips the seal into the groove.

Ease of use during redecoration: the seal can be easily removed from the top or bottom of the door using a screwdriver to release it so that decoration can occur without damaging the seal. Once decorating is completed the seal can be clipped back into place.

Our new unique **'CLIP-IN'** door seal
