

Product Number: 109

Intumescent Glazing Channels

Description:

Intumescent glazing channels available in two types:

FGC is a black, flexible channel containing an intumescent strip either side for glazing.

PGC is a white or brown rigid plastic channel with intumescent material factory-fitted inside with neoprene fins to hold the glass firmly in place.

Use:

Designed for areas where noise and vibration are common. The channel is neoprene and therefore absorbs sound and movement more efficiently than standard glazing fixtures and installations.
