

TEKNOSEAL 4001, an aqueous product for the protection of V-joints and corner joints of new wood designated for exterior use such as windows and doors.

**TECHNICAL DATA**

|                                  |                        |
|----------------------------------|------------------------|
| Binder:                          | Synthetic binder.      |
| Volatile organic compound (VOC): | See Safety Data Sheet. |
| Colour range:                    | Colourless             |

**APPLICATION DETAILS**

|                         |   |                          |         |
|-------------------------|---|--------------------------|---------|
| Pre-treatment:          | The wood must be clean and free from wood dust and contamination. The moisture content of the wood should be approx. 13 % and should not exceed 15 %. |                          |         |
|                         | All softwood and non-durable hardwood for exterior use should either be vacuum impregnated (only softwood) or treated with a wood preservative.       |                          |         |
| Application:            | Is applied by caulking gun. Smooth with a putty knife or the like. Possible surplus is removed.   |                          |         |
| Application conditions: | The product is delivered ready for use.   |                          |         |
|                         | Optimum temperature for products and surroundings:  | 18-22 °C                 |         |
|                         | Do not use at the following temperatures:   | below 5 ° or above 40 °C |         |
|                         | Optimum relative air humidity:  | Approx. 50 %             |         |
| System treatment:       | Primed parts must always be protected with a topcoat treatment before they are exposed to the influence of the weather.                               |                          |         |
| Drying times:           | Determined at 23 °C and 50 % RH:  |                          |         |
|                         | Dry to handle:  | 1 mm thickness           | 2 hours |
|                         |   | 1.5 mm thickness         | 4 hours |
|                         | Excessive application amounts and / or high humidity and / or low temperatures will significantly extend drying times.                                |                          |         |
| Cleaning:               | The equipment is cleaned with water.  |                          |         |

|                          |                        |
|--------------------------|------------------------|
| <b>HEALTH AND SAFETY</b> | See Safety Data Sheet. |
